

# Tina the Tapeworm

(Moniezia expansa)

- You can find me in countries all over the world

- I live in the small intestine

- I have suckers on my head that help me to hold on

- I am the same length as 4 children standing on each others shoulders (Tina = about 4 metres long)

- I am so big that there is usually only 1 of me in a sheep

- I am made up of lots of segments, called proglottids (pro-glot-ids)

- I steal food from the sheep by absorbing it through my skin

- I don't have a stomach
